

Navarra Vending

The Navarra vending unit linking to evoPOS provides retailers with a secure 'dark' method of selling cigarettes and tobacco ensuring that stock can only be accessed once sold.

- All the products are created as stock items in the back office as usual.
- The tobacco products are loaded into each of the numbered chutes in the vending unit.
- A button is then created on the evoPOS item panel* to sell each item and map each product to the corresponding chute number(s).

At the evoBackOffice home screen select Configuration → POS Item Panel Editor

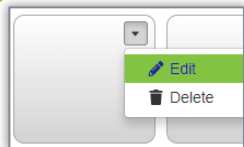

1

The Item Panel will be the first displayed.

Select from the drop-down list of menus* the one the new button is to be added to.

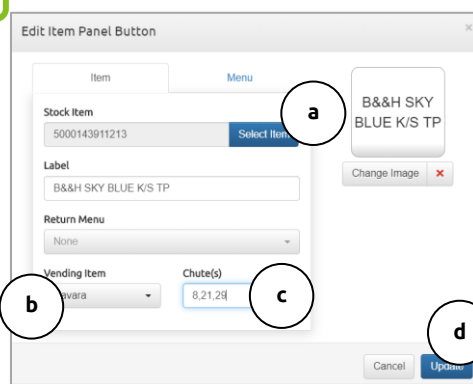

2

Click on the drop-down arrow on the top right of a blank button in the menu required.

Select **Edit**

3

- Select Item: Scan the product barcode. Click **Select Item** to create a button. Description as shown in the stock card will autofill. (This can be edited if required in the Label field).
- Vending Item: select **Navarra** from the drop-down menu.
- Chute (s): enter numbers, user a comma to separate if multiple chutes. E.g. 8,21,29
- Select **Update** to Save

When selling the item at the POS

- Select appropriate item key.
- If the chute is empty the screen will prompt that the "item is out of stock".
- If vending fails, the item will be automatically voided.
- Remember, the item will not be dispensed until the transaction is completed with payment taken.

* For full details on setting up menus and item keys see our evoPOS manual available at the TLM website <https://www.tlmtechnologies.co.uk/>
